

CH 223 – Worksheet 6

1. The normal boiling point of ethanol ($\text{C}_2\text{H}_5\text{OH}$) is $78.3\text{ }^\circ\text{C}$, and its molar enthalpy of vaporization is 38.56 kJ/mol . What is the change in entropy in the system when 68.3 g of $\text{C}_2\text{H}_5\text{OH}$ (g) at 1 atm condenses to a liquid at the normal boiling point?

2. The normal freezing point of 1-propanol ($\text{C}_3\text{H}_8\text{O}$) is $-127\text{ }^\circ\text{C}$. (a) Is the freezing an endothermic or exothermic process? (b) In what temperature range is the freezing of 1-propanol a spontaneous process? (c) In what temperature range is it a nonspontaneous process? (d) Is there any temperature at which liquid and solid 1-propanol are in equilibrium? Explain.

3. Using data from Appendix C, calculate ΔH° , ΔS° , and ΔG° at $25\text{ }^\circ\text{C}$ for the following reaction:

Show that $\Delta G^\circ = \Delta H^\circ - T\Delta S^\circ$

4. Use data from Appendix C to calculate the equilibrium constant, K , at 298 K for the following reaction:

C

Thermodynamic Quantities for Selected Substances at 298.15 K (25 °C)
