

Higher energy anodes

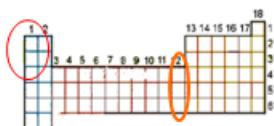

Group 12

Group 1

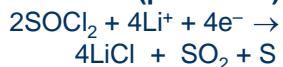

1

Lithium batteries

Cathodes (partial list)

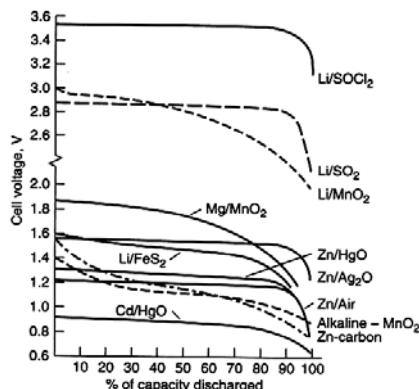

Anode

Electrolyte

Organic-based solvent

18

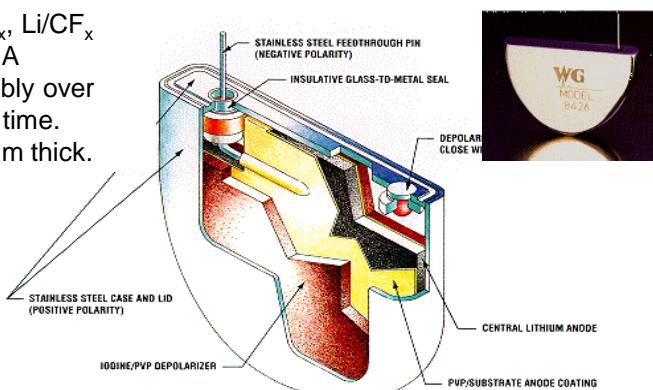

Cathodes for Li primaries

Chemistry	Cathode	SpE Wh/kg	V	Temp. Range	Life / Yrs	Package	Application
Li/ SOCl_2	Thionyl Chloride	700	3.6	-55 -150°C	15-20	Bobbin hermetic weld	Industrial/commercial
Li/ SO_2	Sulfur Dioxide	260	2.8	-55 - 70°C	5	Spiral, hermetic weld, vented	Military/Aerospace
Li/ MnO_2	Manganese Dioxide	330	3.1	-20 - 60°C	5	Spiral, crimped elastomer seal	Consumer
Li/ $(\text{CF})_x$	Poly (Carbon mono-fluoride)	310	2.8	-20 - 60°C	5	Spiral, crimped elastomer seal	Consumer
Li/ I_2	Iodine	230	2.7	0 - 70°C	10	Welded	Implanted medical

19

Implantable Li batteries

(Li/I₂), Li/AgVO_x, Li/CF_x
Designed for mA discharge, reliably over long periods of time.
Smallest is 4 mm thick.

20

Dendrites on metallic Li

Li (m) is not a reversible electrode for long-term cycling.

1. Dendrites grow from electrode on recharging. This causes short-circuits when dendrites grow through separator.
2. High surface area of dendrites causes electrolyte loss.

Na/Sulfur battery

Cathode

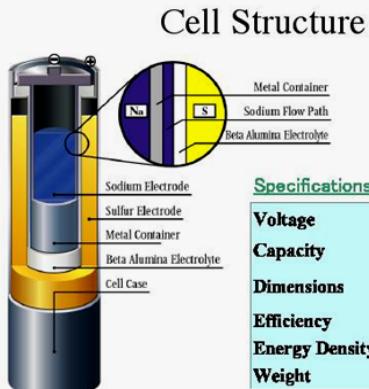

Anode

Electrolyte

Na - β'' -alumina

Electrolyte is a ceramic and serves as a separator. Operating temp is approx. 300 C.

Specifications of the cell

Voltage	2V
Capacity	1220Wh
Dimensions	Diameter 91mm Length 516mm
Efficiency	89% / 8hr rate
Energy Density	367Wh/l
Weight	5.5kg
