Personal Contribution: For this website it was my duty to discuss the pinhole experiment. I uploaded a picture from our work done in the classroom and explained the process we went through in order to understand how this phenomena worked. I expressed the powerful ideas that were involved in this discovery as well.

When I'm learning new concepts the easiest way for me to understand them is through repetition. Last week we were told to discuss our discoveries from this pinhole experiment in our homework. We were asked to demonstrate and explore this phenomenon with a friend or family member as well. Then we were asked to again review this concept through the creation of our website. Due to the fact that I have thought about this concept numerous times I now have a very deep understanding. I may not have understood this concept completely in the beginning; however, because I have reviewed it through explanation as well as teaching it to others, and finally creating a learning tool online I truly understand this scientific idea.
