Contents

Preface	iii
Chapter 1. Computational Science Basics	1
1.1 Computational Physics and Computational Science	1
1.2 How to Read and Use this Book	3
1.3 Making Computers Obey; Languages	6
1.4 Programming Warmup	9
1.5 Computer Number Representations	15
1.6 Problem: Summing Series	25
Chapter 2. Errors & Uncertainties in Computations	29
2.1 Types of Errors	29
2.2 Errors in Spherical Bessel Functions (Problem)	35
2.3 Experimental Error Investigation	37
Chapter 3. Visualization Tools	43
3.1 Data Visualization	43
3.2 PtPlot: 2-D Graphs within Java	44
3.3 Grace/Ace: Superb 2-D Graphs for Unix/Linux	48
3.4 Gnuplot: Reliable 2-D & 3-D Plots	54
3.5 OpenDX for Dicing & Slicing (See App. & CD)	62
3.6 Texturing and 3-D Imaging	62
Chapter 4. Object-Oriented Programs: Impedance & Batons	65
4.1 <i>Unit I. Basic Objects; Complex Impedance</i>	65
4.2 Complex Numbers	66
4.3 Resistance Becomes Impedance	67
4.4 Abstract Data Structures, Objects	68
4.5 Complex Currents	76
4.6 OOP Worked Examples	77
4.7 <i>Unit II. Advanced Objects; Baton Projectiles</i> ○	80
4.8 Trajectory of Thrown Baton	80

4.9	OOP Design Concepts	83
4.10	Supplementary Exercises	97
4.11	OOP Example: Superposition of Motions	97
4.12	Newton's Laws of Motion	98
4.13	OOP Class Structure	98
4.14	Java Implementation	99
Chapter 5. Integration		101
5.1	Integrating a Spectrum (Problem)	101
5.2	Quadrature as Box Counting (Math)	101
5.3	Experimentation	110
5.4	Higher-Order Rules	111
5.5	Monte-Carlo Integration (Stone Throwing)	111
5.6	High-Dimensional Integration	114
5.7	Integrating Rapidly Varying Functions	115
5.8	Non-Uniform Assessment \odot	118
Chapter 6. Differentiation & Searching		121
6.1	<i>Unit I. Numerical Differentiation</i>	121
6.2	Forward Difference	122
6.3	Central Difference	123
6.4	Extrapolated Difference	123
6.5	Error Analysis	124
6.6	Second Derivatives	125
6.7	<i>Unit II. Trial & Error Searching</i>	126
6.8	Quantum States in Square Well	127
6.9	Trial-and-Error Roots via Bisection Algorithm	128
6.10	Newton-Raphson Searching	129
Chapter 7. Systems of Equations via Matrices; Data Fitting		133
7.1	<i>Unit I. Systems of Equations & Matrix Computing</i>	133
7.2	Two Masses on a String	134
7.3	Classes of Matrix Problems	138
7.4	<i>Unit II. Data Fitting</i>	149
7.5	Fitting Experimental Spectrum	149
7.6	Fitting Exponential Decay	156
7.7	Least-Squares Fitting	157
Chapter 8. Differential Equation Applications		167
8.1	<i>Unit I. Free Nonlinear Oscillations</i>	167
8.2	Nonlinear Oscillators (Models)	167
8.3	Math: Types of Differential Equations	169
8.4	Dynamical Form for ODEs	171
8.5	ODE Algorithms	173

CONTENTS

ix

8.6	Solution for Nonlinear Oscillations	179
8.7	Extensions: Nonlinear Resonances, Beats & Friction	181
8.8	Implementation: Inclusion of Time-Dependent Force	182
8.9	<i>Unit II. Binding A Quantum Particle</i>	183
8.10	Theory: The Quantum Eigenvalue Problem	184
8.11	Combined Algorithms: Eigenvalues via ODE + Search	186
8.12	Explorations	189
8.13	<i>Unit III. Scattering, Projectiles, and Planetary Orbits</i>	190
8.14	Problem 1: Classical Chaotic Scattering	190
8.15	Problem 2: Balls Falling Out of the Sky	193
8.16	Theory: Projectile Motion with Drag	194
8.17	Problem 3: Planetary Motion	196
Chapter 9. Fourier Analysis; Signals and Filters		199
9.1	<i>Unit I. Fourier Analysis of Nonlinear Oscillations</i>	199
9.2	Fourier Series	200
9.3	Exercise: Summation of Fourier Series	203
9.4	Fourier Transforms	203
9.5	<i>Unit II. Filtering Noisy Signals</i>	213
9.6	Noise Reduction via Auto Correlation (Theory)	213
9.7	Filtering with Transforms (Theory)	217
9.8	<i>Unit III. Fast Fourier Transform Algorithm (FFT) ⊙</i>	222
9.9	FFT Implementation	226
9.10	FFT Assessment	228
Chapter 10. Wavelet Analysis & Data Compression		229
10.1	<i>Unit I. Wavelet Basics</i>	229
10.2	Wave Packets & Uncertainty Principle (Theory)	231
10.3	Short-Time Fourier Transforms	233
10.4	The Wavelet Transform	234
10.5	<i>Unit II. Discrete Wavelet Transform, MRA ⊙</i>	240
Chapter 11. Discrete & Continuous Nonlinear Dynamics		251
11.1	<i>Unit I. Bug Population Dynamics (Discrete)</i>	251
11.2	The Logistic Map	251
11.3	Properties of Nonlinear Maps	253
11.4	Mapping Implementation	254
11.5	Bifurcation Diagram	255
11.6	Random Numbers via Logistic Map	259
11.7	Other Maps	259
11.8	Signals of Chaos: Lyapunov Coefficients ⊙	259
11.9	Unit I Quiz	262
11.10	<i>Unit II. Chaotic Pendula (Continuous)</i>	263
11.11	Chaotic Pendulum ODE	263

11.12	Visualization: Phase-Space Orbits	266
11.13	Exploration: Bifurcations of Chaotic Pendulums	274
11.14	Alternative Problem: The Double Pendulum	275
11.15	Assessment: Fourier/Wavelet Analysis of Chaos	277
11.16	Exploration: Another Type of Phase Space Plot	278
11.17	Further Explorations	278
11.18	<i>Unit III. Coupled Predator-Prey Models</i> ⊙	280
11.19	Lotka-Volterra Model	280
Chapter 12. Fractals & Statistical Growth		287
12.1	Fractional Dimension	287
12.2	The Sierpiński Gasket (Prob. 1)	288
12.3	Beautiful Plants (Prob. 2)	290
12.4	Ballistic Deposition (Prob. 3)	293
12.5	Length of British Coastline (Prob. 4)	295
12.6	Correlated Growth, Forests and Films (Prob. 5)	299
12.7	Globular Cluster (Prob. 6)	300
12.8	Fractal Structures in Bifurcation Graph (Prob. 7)	302
12.9	Fractals from Cellular Automata	302
12.10	Perlin Noise Adds Realism ⊙	304
12.11	Quiz	308
Chapter 13. HPC Hardware, Tuning & Parallel Computing		309
13.1	<i>Unit I. High-Performance Computers</i>	309
13.2	Memory Hierarchy	310
13.3	The Central Processing Unit	313
13.4	CPU Design: RISC	314
13.5	Multiple-Core Processors	315
13.6	Vector Processor	316
13.7	<i>Unit II. Parallel Computing</i>	317
13.8	Parallel Semantics	318
13.9	Distributed Memory Programming	321
13.10	Parallel Performance	322
13.11	Parallelization Strategy	324
13.12	Practical Aspects of Message Passing for MIMD	326
13.13	Example of Supercomputer: IBM Blue Gene/L	328
13.14	<i>Unit III. HPC Program Optimization</i>	331
13.15	Programming for Data Cache	340
Chapter 14. Thermal Simulations & Feynman Quantum Paths		345
14.1	<i>Unit I. Magnets via Metropolis Algorithm</i>	345
14.2	An Ising Chain (Model)	345
14.3	Statistical Mechanics (Theory)	348
14.4	The Metropolis Algorithm	349

CONTENTS

xi

14.5	Unit II. Magnets via Wang-Landau Sampling ○	355
14.6	Wang-Landau Sampling	358
14.7	Unit III. Feynman Path Integrals ○	362
14.8	Feynman's Space-time Propagation (Theory)	362
14.9	Exploration: Quantum Bouncer's Paths ○	373
Chapter 15. Molecular Dynamics		375
15.1	Molecular Dynamics (Theory)	375
15.2	Verlet and Velocity-Verlet Algorithms	382
15.3	1-D Implementation and Exercise	383
15.4	Trajectory Analysis	384
15.5	Quiz	385
Chapter 16. PDEs for Electrostatics & Heat Flow		387
16.1	PDE Generalities	387
16.2	Unit I. Electrostatic Potentials	389
16.3	Fourier Series Solution of PDE	390
16.4	Solution: Finite Difference Method	392
16.5	Assessment via Surface Plot	396
16.6	Alternate Capacitor Problems	397
16.7	Implementation and Assessment	399
16.8	Electric Field Visualization	400
16.9	Laplace Quiz	401
16.10	Unit II. Finite Element Method ○	402
16.11	Electric Field from Charge Density	403
16.12	Analytic Solution	403
16.13	Finite Element (not Difference) Methods	403
16.14	FEM Implementation and Exercises	408
16.15	Exploration	409
16.16	Unit III. Heat Flow via Time Stepping (Leap Frog)	409
16.17	The Parabolic Heat Equation	410
16.18	Assessment and Visualization	415
16.19	Improved Heat Flow: Crank-Nicolson	416
Chapter 17. PDE Waves: Strings, Quantum Packets and E&M		421
17.1	Unit I. Vibrating String	421
17.2	The Hyperbolic Wave Equation	421
17.3	Waves with Friction (Extension)	429
17.4	Waves for Variable Tension and Density (Extension)	430
17.5	Unit II. Quantum Wave Packets	434
17.6	Time-Dependent Schrödinger Equation (Theory)	434
17.7	Wave Packets in Other Wells (Exploration)	438
17.8	Algorithm for 2-D Schrödinger Equation	438
17.9	Unit III. E&M Waves via FDTD ○	441

17.10 Maxwell's Equations	441
17.11 FDTD Algorithm	442
Chapter 18. Solitons & Computational Fluid Dynamics	449
18.1 <i>Unit I. Advection, Shocks and Russell's Soliton</i>	449
18.2 Theory: Continuity and Advection Equations	450
18.3 Theory: Shock Waves via Burgers' Equation	451
18.4 Including Dispersion	455
18.5 Shallow Water Solitons; the KdV Equation	456
18.6 <i>Unit II. Resting in a River</i>	460
18.7 Hydrodynamics, the Navier-Stokes Equation	461
18.8 2-D Flow Over a Beam	468
18.9 Theory: Vorticity Form of Navier-Stokes Equation	469
Chapter 19. Integral Equations in Quantum Mechanics	477
19.1 <i>Unit I. Bound States of Nonlocal Potentials</i>	477
19.2 Momentum-Space Schrödinger Equation	478
19.3 <i>Unit II. Nonlocal Potential Scattering</i> ⊙	482
19.4 Lippmann–Schwinger Equation	483
Appendix A. Glossary	491
Appendix B. Installing PtPlot & JDK Packages	499
B.1 Installing Java Developer's Kit	501
B.2 Using Classes and Packages	502
Appendix C. OpenDX: Industrial Strength Data Visualization	505
C.1 Getting DX and Unix Running (for Windows)	506
C.2 Test Drive of DX Visual Programming	507
C.3 DX Tools Summary	512
C.4 DX Data Structure and Storage	515
C.5 Sample Visual Programs	516
C.6 Animations with OpenDX	525
Appendix D. An MPI (Message Passing Interface) Tutorial	529
D.1 Running on a Beowulf	530
D.2 Running MPI	533
D.4 Parallel Tuning	544
D.5 A String Vibrating in Parallel	545
D.6 Deadlock	547
D.7 BCCD: Cluster on a CD ⊙	548
D.8 Parallel Computing Exercises	549
D.9 List of MPI Commands	549

CONTENTS

i

Appendix E. Calling LAPACK from C	553
Appendix F. Software on the CD	557
Appendix G. Compression via DWT with Thresholding	563
G.1 More on Thresholding	565
G.2 Wavelet Implementation and Assessment	566
Bibliography	569
Index	583
