

All references to the Earth assume the line element on a sphere:

$$ds^2 = r^2 (d\theta^2 + \sin^2\theta d\phi^2)$$

with a radius  $r$  of approximately 4000 miles.

### 1. DISTANCE

Corvallis is located at approximately  $(44.6^\circ\text{N}, 123.3^\circ\text{W})$ , that is,  $44.6^\circ$  north of the equator (latitude), and  $123.3^\circ$  west of the prime meridian (longitude). Tangent is located at approximately  $(44.6^\circ\text{N}, 123.1^\circ\text{W})$ , and Eugene, is at approximately  $(44.1^\circ\text{N}, 123.1^\circ\text{W})$ .

- (a) Find the approximate distance between Corvallis and Tangent.
- (b) Find the approximate distance between Tangent and Eugene.
- (c) Find the approximate distance between Corvallis and Eugene.
- (d) How good are your approximations?

### 2. EARTH DISTANCE

Portland is located at approximately  $(45.5^\circ\text{N}, 122.5^\circ\text{W})$ , that is,  $45.5^\circ$  north of the equator (latitude), and  $122.5^\circ$  west of the prime meridian (longitude). San Francisco is located at approximately  $(37.5^\circ\text{N}, 122.5^\circ\text{W})$ , and Richmond, VA, is at approximately  $(37.5^\circ\text{N}, 77.5^\circ\text{W})$ .

- (a) Find the approximate distance between Portland and San Francisco.
- (b) Find the approximate distance between San Francisco and Richmond.
- (c) Find the approximate distance between Portland and Richmond.
- (d) How good are your approximations?

*You should avoid doing messy computations! If you really feel one is necessary, it is sufficient to describe the computation without completing it.*
